## A.R.T. Aminoacids Revitalization Therapy

### What does A.R.T. mean ?

A.R.T. is an acronym which means Aminoacids Revitalization Therapy – It is directed to restore the collagen which makes skin young naturally.

### When and why you need A.R.T ?

The cells of the subcutaneous connective tissue in our skin are called fibroblasts. Fibroblasts act by forming collagen and repairing fragile and worn out skin, ensuring skin tone and elasticity.

Fibroblasts activity reduces in time because of aging or other reasons (eating habits, diets, smoking, intense physical activity, long exposure to the sun). Therefore, skin gets old, loses tone, elasticity, brightness, volume, and subsequently wrinkles and furrows appear.

Fibroblasts produce collagen by using a nutritional support: Aminoacids (Glicine, L-Proline, L-Lysine), which are contained in A.R.T. products and are essential to compensate the reduced fibroblasts activity. More is high the Aminoacids quantity available in the interested areas, more cells vitality and their number increase. Therefore, skin gets better greatly.

## ■ ■ ■ What is exactly A.R.T. ?

---

Three Aminoacids (Glicine, L-Proline, L-Lysine), which are contained in A.R.T. products, form collagen.

A.R.T. is based on the combined use of different products based on Aminoacids: JALUPRO (injectable) and PROGLYME (drinkable solution and dermocosmetic anti-aging line).

Every product has an own specific efficacy even though it is used alone. Nevertheless, the injectable JALUPRO and the drinkable solution PROGLYME strengthen their own action reciprocally, better still if they are combined with PROGLYME dermocosmetic anti-aging line.

## ■ ■ ■ What are therapy advantages ?

---

A.R.T. use means to improve skin tone, firmness, elasticity, brightness, but especially attenuate deep wrinkles and superficial wrinkles.

In fact, many clinical studies carried out by Professional Dietetics have shown an important width and depth reduction of the wrinkles on treated subjects. Summarizing, the therapy has shown to own an excellent biorevitalizing efficacy improving main skin aging and photoaging signs. This efficacy grows over time and lasts 6 months. It would be better to get the best results to undergone the therapy (A.R.T.) two times a year. Therapy tolerance was very good in all treated subjects and the treatment is ideal before sunbathing too.

## A.R.T. Aminoacids Revitalization Therapy

---

### ■ ■ ■ Is A.R.T. compatible with other medical/aesthetical treatments ?

---

A.R.T is compatible with most treatments carried out whether surgical, physical or chemical (Pre and Post Surgery, Laser, Thermage, Electroporation, Mesotherapy, IPL, Peeling).

In fact, from experience matured it is possible to see that the results of the aforesaid treatments are significantly improved by contemporary use of A.R.T. products.

A reduction of recovery times (40% at least) has been demonstrated because of aminoacids use as well as a better stability over time of the results in subjects who have undergone the treatments.

### ■ Where can A.R.T. be applied and where is effective ?

A.R.T. can act effectively where there is skin, therefore in every body's zone ( face, neck, breast, hands, arms, legs, abdomen, etc).

### ■ Is A.R.T. based on external substances to the body or on natural substances ?

Aminoacids used are exactly the some ones that intervene in natural processes of the organism and those ones contained in A.R.T. products are pure: it is possible to state that the triggered process is equivalent to the natural one.

### ■ Is A.R.T. an expensive therapy ?

A.R.T. is not more expensive than other medical, aesthetical or beauty treatments and is by far more convenient because it has a global strategic approach, it is flexible and takes advantage of synergistic products action, besides of steady and lasting effect over time.
